## NOS (Never Out of Stock) Box Edge's All-Inclusive On-site Inventory Program

### *When does a NOS Box make sense?*

- When you use a large amount of inventory!
- When your jobsite is remote!
- When your job is time sensitive
- When you just can't run low on inventory!

### The right products at the right time

- Your own on-site warehouse to fulfill your job or manufacturing material needs.
- Edge can work with you to provide materials, consumables, tools, and other items needed for your jobsite ahead of time.
- Different than a keep-fill system, Edge's NOS Box program is typically jointly managed between you and an Edge representative. This has two benefits: Keeps the costs down and makes sure you have the right products during the right phases of your project.

### Flexibility is the key to success

- **Flexibility** is key with the NOS Box program. While many customers utilize a clam-shell style box with common consumable items, you might well have different needs. Edge is always open to discussing your needs and providing a solution that works for your specific requirements.
- **Size of Box/Container:** Box sizes can vary from a small jobsite box to a large Conex. Edge can even place one box per floor if the job is large enough to warrant it.
- **Inventory Type & Amount:** We work with you to get it right. Ask about recommending trade specific products for mechanical, plumbing, electrical, and others. Typical items include Unistrut fittings, fasteners, anchors, spring clips, abrasives, carbide bits, saw blades, safety items, hand tools,...etc.
- **Billing:** Negotiated whether the inventory is purchased up-front or consigned.
- **Management:** Typically you will designate one responsible person for keeping control of the inventory. This person would have a key to the lock and be readily available to open or close

**"Thank you Edge for being so flexible and willing  
to allow us to run our own inventory.  
Our jobsite ran so much  
more efficient with your NOS Box  
available to us!"**
